Education

University of Maryland College Park, MD

Bachelor of Science, Computer Science and Data Science *Sept 2025 – May 2028*

- **Coursework:** Object Oriented Programming, Data Structures and Algorithms, Discrete Structures, Databases
- **Achievements:** Academic Honors, Dean's List
- **Organizations:** College Park Scholars (Science, Technology, Society)

Technical Stack

- **Languages:** Java, Kotlin, Python, TypeScript, JavaScript, C/C++, SQL, MATLAB, HTML/CSS
- **Frameworks & Tools:** React.js, Vite, Firebase, Pandas, Pytest, Git
- **Certifications:** AWS Certified Cloud Practitioner, PCEP – Certified Entry-Level Python Programmer

Experience

U.S. Centers for Medicare & Medicaid Services (CMS) Woodlawn, MD

Software Developer Intern (Part-Time) *Sep 2026 – Present*

- Develop and maintain large-scale Medicare pricing applications ("Pricers"), implementing updates to core logic, configuration pipelines, and data models using Java, Maven, and Git.
- Convert internal SAS programs to Python under an HHS CIO directive to modernize legacy analytics code.
- Automate and monitor release workflows for annual, quarterly, and off-cycle Pricer updates using GitHub, Jira, Confluence, and Slack, ensuring seamless deployment across DEV, IMPL, and PROD environments.
- Conduct code reviews and partner with technical leads to enforce coding standards, security (CVE suppression), and SonarQube quality gates prior to production release.
- Build and validate automated pipelines that transform policy input files (CSV, YAML, Excel) into fee schedules and pricing files for Medicare claim reimbursement.

Data Analyst Intern (Full-Time) *Jun 2026 – Aug 2026*

- Built an animated, graphics-driven presentation application in **TypeScript**, implementing reusable slide components and programmatic chart animations to communicate case-routing workflows to staff and leadership.
- Automated recurring case-data reporting through formula-driven pipelines and pivot-based aggregations, eliminating manual tracking steps and reducing turnaround time on recurring deliverables.
- Queried and analyzed claims and case-routing data from internal CMS systems, transforming raw extracts into summary dashboards that surfaced patterns used for team decision-making.
- Translated stakeholder requirements into structured technical specifications for internal tooling, and documented a SharePoint migration covering folder hierarchy, metadata schema, and access configuration.

RAINN

DevOps Engineer Intern (Part-Time) *Jun 2026 – Aug 2026*

- Root-caused an 8-month silent outage in a production **CloudWatch → SNS → Lambda → Slack** alerting pipeline by mining 30 days of logs to prove all 147 invocations returned `400 invalid_token`, isolating error handling that never inspected the outbound HTTP status.
- Restored and hardened the Python notifier by rotating the dead webhook and migrating a hardcoded secret into **SSM Parameter Store**, adding status-code validation so delivery failures surface as real CloudWatch errors.
- Re-architected alarm routing, splitting URL/downtime alerts from infrastructure health alarms into dedicated Slack channels to cut noise and improve on-call signal.
- Authored least-privilege **IAM** policies in JSON and automated a standardized AWS resource tagging strategy across existing infrastructure, hardening security and improving cost visibility.

Projects

AWS SATv2 Findings Assistant *2026*

Python, Pandas, Pytest, HTML, Git

- Developed a privacy-first Python CLI that parses AWS SATv2/Prowler exports, redacts sensitive infrastructure data, and generates AI-ready remediation summaries without exposing raw CSV records.
- Engineered a streaming pipeline processing large CSVs in constant memory, normalizing multiple export schemas and classifying findings by severity into HTML/Markdown reports, backed by a Pytest privacy-validation suite.

Personal Portfolio *2026*

React, Vite, JavaScript, AWS, Git

- Built and deployed a responsive single-page application with React and Vite using a component-based architecture.
- Implemented cloud hosting and CDN delivery on AWS S3 and CloudFront with Route 53 domain routing and HTTPS via Certificate Manager; optimized load times through asset bundling and cache-control tuning.
